## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 rejected under 35 U.S.C. 102(b) as being anticipated by Cho, US 5,523,783.

Claim 1 recites “ A remote control pan head system, comprising:

an operation part which outputs a control signal to a remote control pan head in which a camera is mounted, at least one of the remote control pan head and the camera being controlled with the control signal; and

a data converter which converts a communication data outputted from the operation part including the control signal into a data format that conforms with a data format for the remote control pan head, and transmits the converted communication data to the remote control pan head” reads on Cho (col. 4, lines 29-64; fig. 3).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 2612

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2 and 3 rejected under 35 U.S.C. 103(a) as being unpatentable over Cho as applied to claim 1 above and further in view of Cortjens et al. US 5,515,099.

*Cho fails to teach*  
Re claim 2, "...wherein the data converter comprises a recognition device which automatically recognizes a type of data format of the communication data outputted from the operation part", as claimed. However the above technical features as claimed are well known and used in the art as evidenced in Cortjens (col.6, lines 7-51).

Therefore, taking the combined teaching of Cho and Cortjens as a whole, it would have been obvious to modify Cho to include a data recognition device as taught in Cortjens. Doing so would provide a method for automatically recognizing a type of data format and converting the data format into a format appropriate for the operation of the specified mechanism (eg. Pan/tilt mechanism).

Re claim 3, Cho fails to teach "...wherein the data converter comprises a switching device which is operated by a user to designate a type of data format of the communication data outputted from the operation part", as claimed. The mentioned switching device allows a user to designate a type of data format to be used. However, user operated switching devices are well known and used in the art as evidenced in Cortjens (col.6, lines 60-65; col. 7, lines 43-52).

Art Unit: 2612

Therefore, taking the combined teaching of Cho and Cortjens as a whole, it would have been obvious to modify Cho to include a user operated switching device as taught in Cortjens. Doing so would provide a method for a user to manually designate the type of data format appropriate for the operation of the specified mechanism (eg. Pan/tilt mechanism).

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Cortjens et al. (US Patent #: 5,583,565) discloses a method for automatically adjusting the pan and tilt of a video conferencing system camera. The information disclosed in this document regarding the remote manipulation the pan and tilt of a camera is pertinent material.

Ikeda (US Patent #: 5,745,223) discloses an image pick-up device connectable to a pan head. The information disclosed in this document regarding the connection of various pan heads to a camera is pertinent material.
